

Real time chatApp

Connect. Chat. Share. Instantly.

OBJECTIVES

To develop a secure real-time chat application for instant communication between users.

To implement messaging features such as text messaging, image sharing, voice messages, typing indicators, online/offline status, and read receipts.

To provide secure user authentication, profile management, and password recovery functionality for improved user experience and data security.

METHODOLOGY

01

System Setup & User Authentication (React, Node, MongoDB)

02

Real-Time Messaging (Socket.IO Integration)

03

Profile Management

04

Media Sharing Module

05

Message Management

06

Password Recovery System (OTP Verification)

07

Testing & Integration

08

Deployment & Maintenance

★ KEY FEATURES ★

User Authentication

Real-Time Messaging

Typing Indicator

Online / Offline Status

Image Sharing

Voice Messages

Edit / Delete Message

Password Recovery (OTP)

OUTCOMES

Real-time chat with instant message delivery.

Secure user authentication and data protection.

Multimedia (images & voice) enhances user experience.

Typing indicators improve real-time interaction.

OTP based password recovery ensures account security.

CONCLUSION

The Real time chatApp provides a fast, secure, and reliable communication platform with features like real-time messaging, multimedia sharing, typing indicators, online status, and OTP-based password recovery, ensuring a seamless and enhanced user experience.
